SMART UP EDUCATION

ERP – Fees Management Module

Developer Scope of Work & Functional Requirements

Document version: 1.0 **Date:** 16 October 2026 **Prepared for:** ERP Development Team

Purpose
Build a drill-down Fees Overview that lets management move from organisation-level totals to curriculum, class, course/batch, and individual student fee details. Every level must show student count, total fee amount, amount collected, pending amount, and dues till date.

The navigation and fee categories below follow the requested structure. Product names, class ranges, batch names, currencies, and fee plans must be configurable by authorised administrators rather than hard-coded.

Document contents

• 1. Objective and scope

• 2. Required navigation / drill-down hierarchy

• 3. Fees Overview dashboard and metric definitions

• 4. Student-level fee ledger and collection workflow

• 5. Due management, reminders, refunds and adjustments

• 6. Reports, filters, roles, audit and technical requirements

• 7. Acceptance criteria and developer handover checklist

• Appendix A. Sample dashboard UI mockup

1. Objective and Scope

Develop a centralised fee management module inside Smart Up Education ERP. It must provide a clear summary of fees expected, collected, pending, and overdue, and allow the user to drill down through each business/product segment until the user reaches the fee ledger for each student.

In scope

• Organisation-wide Fees Overview with date filters and summary KPIs.

• Separate fee performance for State, CBSE Kerala, CBSE GCC, and CBSE GCC Offline.

• Class-wise and course/batch-wise drill-down based on the selected segment.

• Student fee ledger with fee plan, instalments, receipts, due dates, outstanding balance, and payment history.

• Fee collection entry, receipt generation, due tracking, reports, role permissions, and audit trail.

• Configurable fee structures and product/batch setup, with data linked to the existing admission/student record where available.

Out of scope unless separately approved: full accounting/General Ledger, payroll, admission CRM redesign, payment gateway procurement, and migration of historical data beyond the agreed import template.

2. Required Navigation and Drill-Down Hierarchy

The user should be able to click each level of the Fees Overview. Every click opens the next level with the same KPI summary recalculated for the selected filter, plus the relevant list/table. Breadcrumbs must show the path and allow the user to return to any parent level.

2.1 Navigation tree

Level	Screen / selection	Next level / expected view
0	Fees Overview (All products / all centres)	Summary KPIs + product/segment cards or table
1	State	Class 8, 9, 10, 11, 12 (configurable)
2	State → Class 8	Regular / Crash
3	State → Class 8 → Regular	Batch A, Batch B, Batch C, etc.
4	State → Class 8 → Regular → Batch A	List of every student in Batch A with fee details
1	CBSE Kerala	Class 8, 9, 10, 11, 12
2	CBSE Kerala → Class 8	1:1 / 1:3 / Micro Batch
3	CBSE Kerala → Class 8 → 1:1	All students in that course/batch type with fee details
1	CBSE GCC	Class 8, 9, 10, 11, 12
2	CBSE GCC → Class 8	1:1 / 1:3 / Micro Batch (configurable)
3	CBSE GCC → Class 8 → 1:1	All matching students with fee details
1	CBSE GCC Offline	Class 8, 9, 10, 11, 12, then configurable course/batch types

Important: State, CBSE Kerala, CBSE GCC, and CBSE GCC Offline must be separate configurable segments. Their class lists, delivery mode, fee plans, course types, batches, and currency can differ. The developer must not assume every segment has identical options.

2.2 Batch and student listing

• Clicking a batch/course type opens a searchable, paginated student table; it must not require downloading a report to see the students.

• The student table must show all enrolled students matching the selected path, including students with fully paid fees, partially paid fees, overdue fees, or no payment yet.

• Clicking a student opens their detailed fee ledger and payment history.

• Provide a clear empty state when no students or no fee records match the selected path.

• Show the current navigation path, for example: Fees Overview > State > Class 8 > Regular > Batch A.

3. Fees Overview Dashboard

The dashboard is the landing page for authorised management and finance users. It should load with all products/segments selected and a default reporting period. It must support drill-down by clicking a segment or summary row.

3.1 Required KPI cards at every level

KPI	Definition / display rule
Total Students	Count of unique active/enrolled students within the selected filters. Provide an agreed rule for including completed/cancelled students; default is active enrolments only.
Total Fees	Total fee amount assigned to the selected students for the selected academic year/product, including approved discounts in the net payable amount. Show gross fee and discount separately where applicable.
Total Collected	Successful payments received and posted against the selected students/fee plans, net of approved refunds or reversals.
Pending	Net payable fee minus net collected amount. Must never be negative; overpayments should be shown separately as advance/credit.
Due Till Date	Amount that should have been paid on or before the selected as-of date, less payments credited by that date. Exclude future instalments.
Overdue Students	Number of students with a positive overdue balance as of the selected date.

3.2 Recommended dashboard layout

• Top bar: reporting date/as-of date, academic year, centre/branch, delivery mode, currency, search, and last-updated timestamp.

• KPI cards: Total Students, Total Fees, Total Collected, Pending, Due Till Date, Overdue Students.

• Product/segment summary table: State, CBSE Kerala, CBSE GCC, CBSE GCC Offline. Each row shows all five core KPIs and is clickable.

• Visuals: monthly collection trend; collected vs target/total fees; product-wise collection; centre-wise collection; due ageing.

• Operational tables: recent collections and top overdue students with a click-through to student details.

• Export actions: download the current view as Excel/CSV and print or export a PDF report, subject to permission.

3.3 Filters and calculations

• All dashboard values must update consistently when the user changes date range, as-of date, academic year, product, centre, class, batch/course type, or payment status.

• Separate the collection-period filter from the due-as-of date. A payment received this month can reduce outstanding balance, while due till date is calculated using the selected as-of date.

• Use a single calculation service/business rule for totals at every hierarchy level so parent totals reconcile to child totals, subject to clearly identified exclusions or unallocated transactions.

• Support INR and, where relevant for GCC, the configured currency. Do not add amounts in different currencies together without conversion. Show per-currency totals or an explicitly configured reporting currency and exchange-rate rule.

4. Fee Structure and Student Fee Ledger

4.1 Fee structure setup

• Admin can create fee plans by product/segment, academic year, class, course type, delivery mode, centre, and batch where applicable.

• A fee plan can contain tuition fee and optional fee heads such as registration, material, exam, or other approved charges.

• Configure total fee, discount/scholarship, net payable, instalment count, instalment amount/percentage, due dates, and late-fee policy (if used).

• Allow full payment, part payment, and instalment payment. Instalment amounts must reconcile to the net payable amount, allowing an approved final rounding adjustment.

• Fee-plan changes after a student has been assigned a plan must be permission-controlled and must not silently rewrite existing invoices or historical payments.

• Provide effective dates and version history for fee structures.

4.2 Student list columns

Field	Requirement
Student ID / name	Unique student ID and full name; name opens student profile.
Segment / class / course / batch	Show the selected hierarchy and the student's current assignment.
Fee plan	Gross fee, discount/scholarship, net payable amount.
Collected	Successful payments posted against this student's fee plan.
Pending balance	Net payable less net collected, plus/minus approved adjustments.
Due till date	Instalments due as of the selected date minus payments credited to those instalments.
Next due date	Nearest unpaid future instalment date; blank if no future due.
Overdue days / status	Days overdue for the oldest unpaid instalment and status: Paid, Part Paid, Due Soon, Overdue, Waived, Refunded, or Credit.
Actions	View ledger, collect payment, view/download receipt, view due schedule; actions depend on role.

4.3 Student fee ledger

• Student profile summary: student ID, name, guardian/contact, admission date, segment, class, course type, centre, batch, academic year, and fee plan.

• Fee summary: gross fee, discount, net payable, collected, pending, due till date, overdue amount, and advance/credit.

• Instalment schedule: instalment number/name, due date, amount due, amount paid, balance, payment status, and overdue days.

• Transaction history: receipt number, payment date/time, amount, mode, reference/transaction ID, collector, allocation to fee head/instalment, and status.

• Allow authorised users to open or download a receipt/invoice and view the audit history of edits, reversals, waivers, or refunds.

5. Fee Collection, Due Management and Adjustments

5.1 Collection workflow

• User selects a student and chooses Collect Fee. The screen displays total payable, already collected, outstanding balance, instalments due, and any advance/credit.

• User enters amount, payment date, payment mode (cash, UPI, card, bank transfer, payment gateway, or configured modes), transaction/reference number, remarks, and allocation to one or more fee heads/instalments.

• System validates that the amount is positive and flags overpayment. Overpayment is allowed only if the business policy permits it; otherwise block it with a clear message.

• On successful save, generate a unique receipt number, update the ledger and all parent dashboard totals immediately, and allow receipt PDF/print/share.

• Failed or pending gateway transactions must not be counted as collected until verified as successful.

• Duplicate transaction references should be detected and flagged to reduce duplicate collections.

5.2 Due list and reminders

• Due list filters: due today, due within 7 days, overdue, date range, segment, class, batch, centre, student, and balance range.

• Show total due amount, overdue amount, number of students, next due date, and oldest overdue age.

• Ageing buckets configurable by admin; default: 0–7 days, 8–15 days, 16–30 days, and over 30 days.

• Reminder templates for email/SMS/WhatsApp can be configured. Store reminder date, channel, recipient, and delivery status if the messaging provider supports it.

• Do not send reminders automatically until an authorised user enables the policy and confirms the template, recipient rules, and schedule.

5.3 Refunds, cancellations, waivers and corrections

• Refunds, cancellations, fee waivers, discounts added after payment, and payment reversals require a reason and an authorised approval where configured.

• Never permanently delete a posted financial transaction. Use reversal/refund/adjustment entries so the audit trail and reports remain correct.

• A cancelled student must retain their historical fee ledger. Display the cancellation status and apply the configured cancellation/refund policy.

• Reports must clearly distinguish fees assigned, collections, refunds, waivers/discounts, reversals, and net collections.

6. Reports, Permissions and Technical Requirements

6.1 Required reports

Report	Minimum contents
Fees overview	All KPIs by date, academic year, segment, centre, class and batch/course type.
Collection report	Payment date, receipt, student, segment, product, class, batch, amount, mode, collector, transaction status.
Pending fee report	Student-level net payable, collected, pending, due till date, next due date and overdue age.
Due/overdue report	Instalment-level due dates, due amount, paid amount, outstanding, days overdue and reminder status.
Product/segment report	State, CBSE Kerala, CBSE GCC and CBSE GCC Offline totals with drill-down.
Class and batch report	Student count and fee KPIs by class, course type and batch.
Refund/cancellation report	Student, reason, original payment, refund/adjustment amount, approval and date.
Daily collection closing	Opening context if maintained, cash/UPI/bank/card totals, refunds, net collection and collector-wise summary.
Audit report	Who created/edited/approved/reversed a fee or transaction, when, and the before/after values.

6.2 User roles and access

Role	Suggested permissions
Super Admin	All setup, all segments, users/roles, fee plan configuration, reports, corrections and audit access.
Finance Admin	View all fee data; post collections; manage approved refunds/adjustments; export reports.
Centre/Branch Manager	View assigned centres and segments; monitor dues; collection access only if granted.
Fee Collector / Counsellor	Search assigned students, post collection, issue receipts; no fee-plan editing or refund approval unless authorised.
Academic / Operations	Read-only student/class/batch fee status as permitted; no financial transaction editing by default.
Management Viewer	Read-only dashboards and reports across authorised segments.

6.3 Technical and usability requirements

• Responsive web interface suitable for desktop and tablet; core tables usable on mobile.

• Search by student name, student ID, guardian phone, receipt number, or transaction reference, respecting user permissions.

• Server-side pagination, sorting and filtering for large student lists; avoid loading all students at once.

• Secure authentication, role-based access, encrypted transport, appropriate protection of student/guardian data, and session timeout.

• Audit log for financial actions and configuration changes; timestamp and user identity must be stored.

• Daily backup and documented restore process; export and import templates must validate data before posting.

• API/integration with the existing admission/student module so student, class, product and batch details are not duplicated unnecessarily.

• Store currency and transaction timestamps consistently; display dates in the organisation's configured time zone.

• Dashboard should show last refreshed time and a clear error state if data cannot be loaded.

7. Calculation Rules and Acceptance Criteria

7.1 Standard calculation rules

Metric	Recommended calculation
Net payable	Gross assigned fee – approved discounts/waivers + approved additional charges.
Net collected	Successful posted payments – posted refunds/reversals. Pending/failed gateway payments are excluded.
Pending balance	Net payable – net collected, with any negative balance shown separately as student credit/advance.
Due till date	Sum of instalments with due date on or before the as-of date – payments allocated/credited to those instalments, adjusted for approved waivers/reversals.
Overdue amount	Unpaid amount for instalments whose due date is before the current/as-of date, according to the configured grace-period policy.
Total students	Distinct student enrolments in the selected segment and filters. If one student has multiple enrolments, count enrolments for fee reporting and label this rule clearly.

The developer and Smart Up Finance team must sign off on these definitions before UAT. If the existing ERP uses different accounting rules, document the approved variation and apply it consistently.

7.2 Acceptance criteria (UAT checklist)

■ Opening Fees Overview displays Total Students, Total Fees, Total Collected, Pending, and Due Till Date.

■ Clicking State opens classes 8–12; clicking a class opens Regular/Crash; clicking Regular opens batches A/B/C; clicking a batch opens its student list.

■ Clicking CBSE Kerala opens classes 8–12; clicking a class opens 1:1, 1:3, and Micro Batch; clicking a course type opens the relevant student list. Same configurable pattern works for CBSE GCC and CBSE GCC Offline.

■ At every level, KPI totals match the sum of included child records under the same filters and calculation rules.

■ Student list shows fee plan, collected, pending, due till date, next due date, and overdue status.

■ Posting a valid payment creates a unique receipt and updates student ledger, due list, and dashboard totals.

■ Failed/pending payments are not counted as collected; duplicate references are flagged.

■ Refund/reversal/waiver requires permissions and a reason, and the original transaction remains visible in the audit trail.

■ Reports can be filtered and exported; access is restricted by role and centre/segment scope.

■ All required screens work with empty results, large lists, and validation errors without losing entered data.

7.3 Developer deliverables

• Approved screen designs/wireframes for dashboard, hierarchy views, student list, fee ledger, collection, due list, and reports.

• Database/entity design and documented calculation rules.

• Working Fees Management module integrated with the student/admission module.

• Role and permission configuration; audit logging; receipt/invoice template.

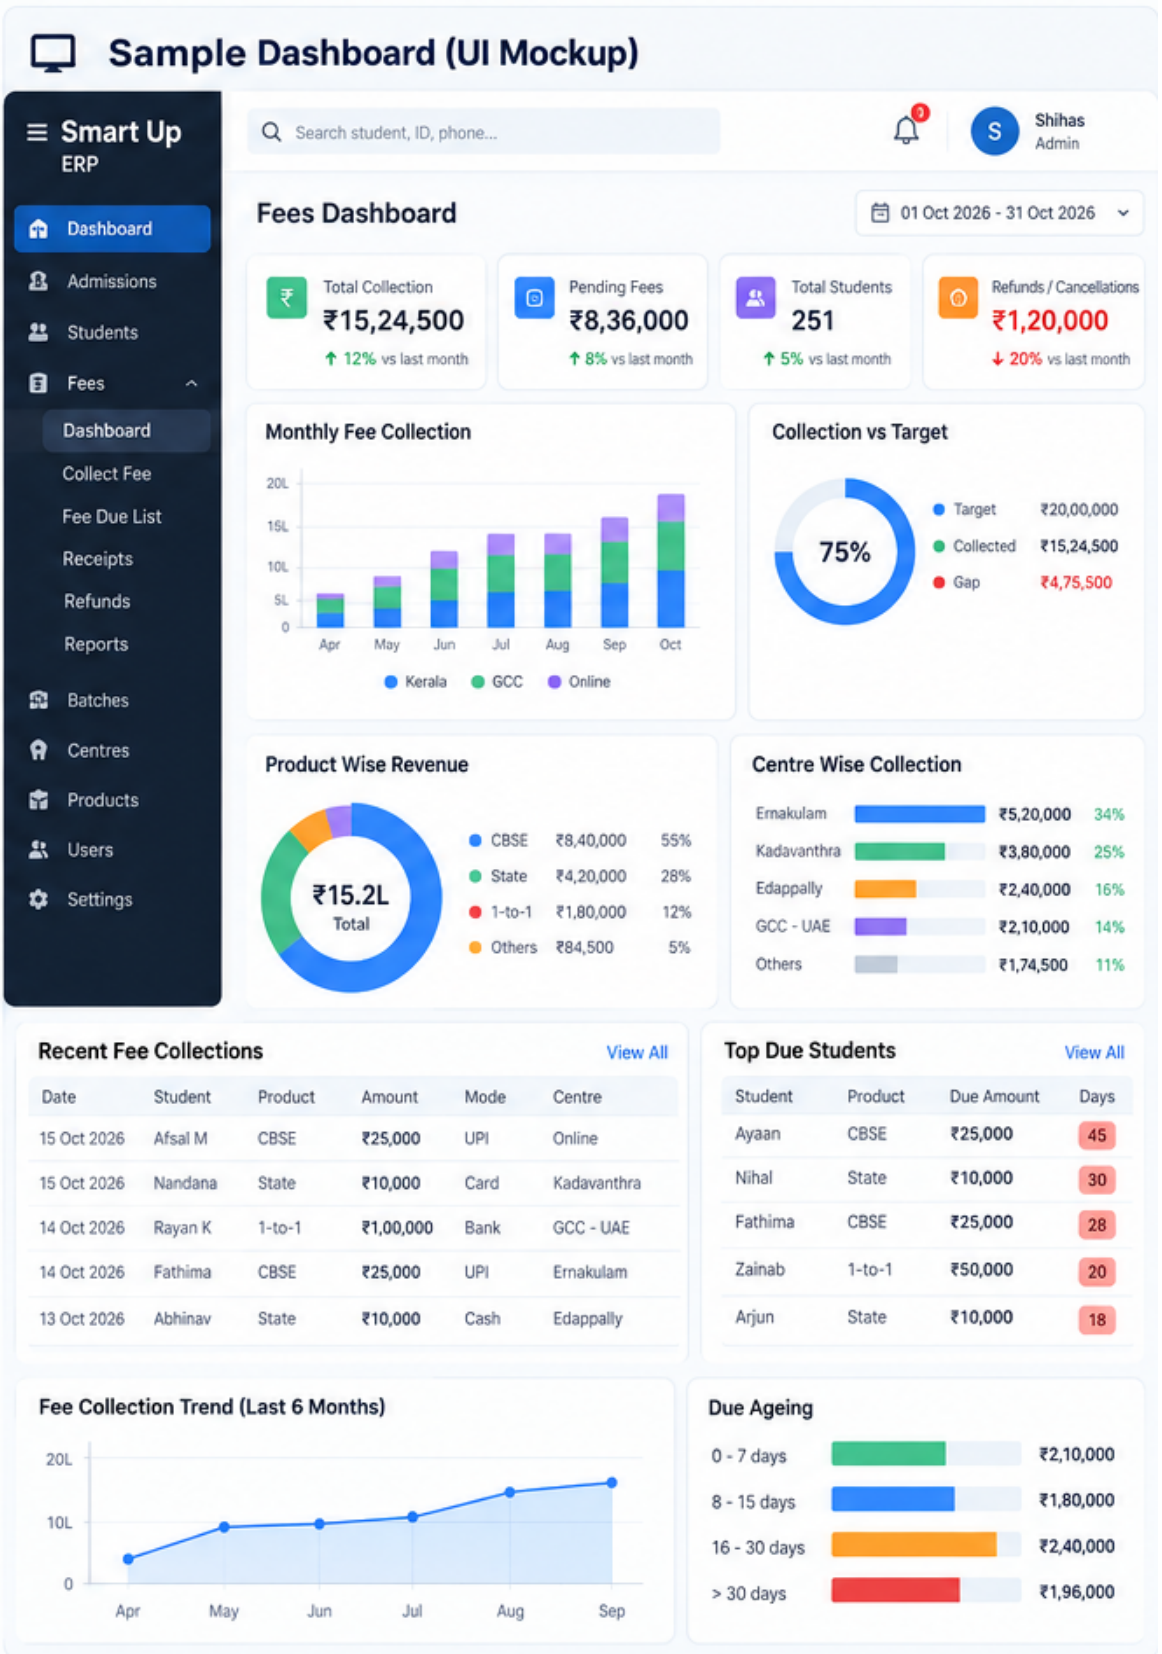

• Sample data and import template for testing; no production financial data in test environments unless approved.

• Unit/integration test results, UAT build, defect log, deployment plan, backup/rollback plan, and administrator/user guide.

• Handover session for Finance, Operations and Admin users.

Appendix A. Sample Dashboard UI Mockup

Illustrative only: figures, names, percentages, and transactions shown in the mockup are dummy data and must not be used as actual financial values. The final UI should follow Smart Up branding and the approved ERP design system.
